Pandemic crisis meaning in english

The World Health Organization (WHO) has declared the coronavirus outbreak a pandemic as the virus continued to spread around the world. More than 124,000 people from at least 114 countries have been infected with covid-19, the medical term for the virus, according to the WHO. Of these, more than 68,000 have recovered, according to data collected by Johns Hopkins University, which is tracking the virus. At least 4,600 people have died from the disease, according to the WHO. What is a pandemic? Who defines the word pandemic without words : the worldwide spread of a new disease. According to the U.S. Centers for Disease Control and Prevention (CDC), a pandemic is a disease that has spread to several countries around the world, which usually affects large numbers of people. The word comes from the Greek word pan meaning everything and demos meaning people. Why did who label the coronavirus outbreak a pandemic? In statements to the media on Wednesday, Tedros Adhanom Ghebreyesus, director general of the WHO, said he was deeply concerned about the alarming levels of inaction as the outbreak shows no signs of slowing down. In the past two weeks, the number of COVID-19 cases outside China has increased 13-fold, and the number of affected countries has tripled, Tedros said. According to the WHO, more than 90 percent of cases are in only four countries – China, Italy, Iran and South Korea. However, the number of cases in China and South Korea is decreasing significantly, according to the WHO. Many countries continue to face an uphill battle when it comes to combating the spread. Some countries are struggling with a lack of capacity. Some countries are struggling with lack of resources, Tedros added. What will this mean for the outbreak? After the announcement, several countries expanded their responses and put in place even stricter controls. Denmark, which has reported a 10-fold jump in cases since Monday, said it was closing all schools and universities as of Friday. Non-critical public sector employees will also be sent home. Saudi Arabia suspended travel and flights to the European Union and several other countries after the announcement. The US State Department also urged citizens to reconsider overseas travel with President Donald Trump suspending all flights from Europe except the UK. The ban will be in place for at least a month, Trump said. The declaration of a pandemic often leads governments to spend more on preventive measures and funding for vaccination programs. This was the case the last time who declared a pandemic in 2009 during the H1N1 swine flu outbreak. Source : Al Jazeera pan- dem- ic \ | \ pan- de- mik 11 : occurred in a wide geographical area (such as several countries or continents) and usually affects a significant part of the population pandemic influenza was pandemic and claimed millions of lives. 1 : an outbreak of a disease that occurs in a wide geographical area (such as several countries or continents) and in general a significant proportion of the population - an outbreak of pandemic from a disease a global pandemic Influenza Pandemic seems to strike every few decades and kill by the million - at least 1m in 1968; perhaps 100m in the Spanish flu from 1918-1919. — The Economist 2 : an outbreak or product of the rapid sudden spread, growth or development : epidemic entry 2 sense 2 We have been talking about the pandemic of racism for centuries.— Roger Griffith Nobel Prize-winning economist Robert Shiller warns a pandemic of fear could tilt the economy to an undeserved depression.— Stephanie Landsman An epidemic is an epidemic. A pandemic is a kind of epidemic: one that has spread 100% wider than an epidemic, and has affected a significant portion of the population. When does an outbreak turn into pandemic? An outbreak is a sudden increase in the incidence of a disease and is typically limited to a localized area or a specific group of people. If an outbreak becomes more severe, and less localized, it can be characterized as an epidemic. If further enlarged, and affects a significant portion of the population, the disease can be characterized as a pandemic. What are some examples of pandemics? There have been a number of pandemics since the early 20th century: the H1N1 pandemic of 2009, the Spanish flu of 1918/19 (which did not originate in Spain), as well as the flu pandemic in 1957 and 1968, and now the COVID-19 pandemic of 2019/20. Among the best-known pandemics is the Black Death, a plague that spread across Asia and Europe in the mid-14th century. ... globalisation, the most thorough socioeconomic upheaval since the Industrial Revolution, which has launched a pandemic of retrogressive nationalism, regional separatism and religious extremism. - Martin Filler, New York Book Review, September 24, 2009... he also hopes to use this cultural research to better understand strategies to reduce the massive pandemic we now understand smoking to produce. — Allan M. Brandt, The Cigarette Century, 2007 There is evidence that this game pandemic is going global. — Gerri Hirshey, New York Times Magazine, July 17, 1994 In ten years that erupted, this pandemic took or ravaged the lives of nearly five million people before it disappeared, as mysteriously and suddenly as it had come, in 1927. — Oliver Sacks, Awakenings, 1973 The flu pandemic of 1918 claimed millions of lives.
